## Experience

---

Dec2020 – Aug2021

**Sauda Technologies**

- Worked on many products on various parts from designing, development, testing to deploying the changes to production.
- With a team of mere 4-5 developers, we were able to develop, maintain and scale multiple products.
- Worked on building dashboard and company website from scratch.
- Developed modules by consuming the REST API.
- Designed clean code for project maintainability and testability.
- Securing the application using session-based logs.
- Designed templates for UI and UX improvements.
- UI improvements as per business requirements

## Certificates

---

- **The Web Developer Bootcamp**
- **The Modern React Bootcamp**
- **JavaScript: The advanced Concepts**

## Side Project

---

- **React Colors** (React.js)

A complete React based application that allows user to copy different shades of colors from different palettes. User can create own palette of colors through which anyone can copy colors in future

- **YouCamp—Campgrounds Site** (Express (Rest API), Node.js Passport.js, Bootstrap, MongoDB)

It is a Site that allows users to create and find camping places, it allows users to comment on the other campgrounds made by other users. Also, user needs to register before creating or commenting.

- **Woodwork's** (React, Express, Node.js, MongoDB)

Website for purchasing furniture.

All furniture is divided into categories for better experience
